

2 PIECES BALL VALVES FLANGED ISO PN 16

ISO 9001:2008

BUREAU VERITAS
Certification

Size : DN 15 to 300 mm
Ends : ISO PN16/40 R.F. Flanges
Min Temperature : - 20°C
Max Temperature : + 200°C
Max Pressure : 40 Bars up to DN50 (16 bars over)
Specifications : ISO 5211 mounting pad
PTFE filled with glass seat
Anti blow-out stem
Atex
Fire safe according to API607 up to DN150

Materials : Carbon steel or Stainless steel

2 PIECES BALL VALVES FLANGED ISO PN 16

SPECIFICATIONS :

- Full bore
- Anti blow-out stem
- Double antistatic device
- PTFE filled with glass seat
- Locking device
- ISO 5211 mounting pad
- 2 pieces type (Split body)
- Hollowed ball from DN125 to DN300
- With exhaust hole in the ball (located in the top of the ball to avoid overpressure in it)
- Primer coating for carbon steel valves (Ref. 762)

USE :

- Chemical industries, petrochemical industries, hydraulic installation, compressed air, heating and water distribution
- Steam : 11 bars maximum
- Min and max Temperatures Ts : -20°C to + 200°C
- Max Pressure Ps : 40 bars up to DN50, 16 bars over (see graph under)

PRESSURE / TEMPERATURE GRAPH (STEAM EXCLUDED) :

PRESSURE

(Bar)

RANGE :

- Carbon steel body **Ref. 762** from DN 15 to DN 200 (with gearbox from DN250 to 300)
- Stainless steel body **Ref. 763** from DN 15 to DN 200 (with gearbox from DN250 to 300)
- Gearbox possible **Ref. 9830296-9830297** from DN 150 to DN 200

ENDS :

- R.F. Flanged ISO PN40 up to DN50, ISO PN16 over

STANDARDS :

- Fabrication according to ISO 9001 : 2008
- DIRECTIVE 97/23/CE : CE N° 0035
Risk Category III Module H
- Construction according to EN 12516-1
- Tests according to API 598, table 6
- ISO PN16 R.F. flanges according to EN 1092-1 PN16
- ISO 5211 mounting pad
- Length according to EN 558 series 27 (DIN 3202 F4/F5)
- ATEX Group II Category 2 G/2D Zone 1 & 21 Zone 2 & 22 (optional marking)
- Fire safe according to API 607 5° edition up to DN100, 4° edition from DN125 to DN150

2 PIECES BALL VALVES FLANGED ISO PN 16

INSTALLATION INSTRUCTIONS

GENERAL GUIDELINES :

- Ensure that the valves to be used are appropriate for the conditions of the installation (type of fluid, pressure and temperature).
- Be sure to have enough valves to be able to isolate the sections of piping as well as the appropriate equipment for maintenance and repair.
- Ensure that the valves to be installed are of correct strength to be able to support the capacity of their usage.
- **Installation of all circuits should ensure that their function can be automatically tested on a regular basis (at least two times a year).**

INSTALLATION INSTRUCTIONS :

- **Before installing the valves, clean and remove any objects from the pipes** (in particular bits of sealing and metal) which could obstruct and block the valves.
- **Ensure that both connecting pipes either side of the valve (upstream and downstream) are aligned (if they're not, the valves may not work correctly).**
- **Make sure that the two sections of the pipe (upstream and downstream) match, the valve unit will not absorb any gaps. Any distortions in the pipes may affect the tightness of the connection, the working of the valve and can even cause a rupture.** To be sure, place the kit in position to ensure the assembling will work.
- **If sections of piping do not have their final support in place, they should be temporarily fixed. This is to avoid unnecessary strain on the valve.**
- Tighten the bolts in cross.
- It's recommended to operate the valve (open and close) 1 to 2 times per year
